Emotional Intelligence

Recognizing emotions

Click start to begin. Start

Introduction

Most people express their emotions through a combination of verbal and nonverbal signals. In the following experience, we've prepared a set of videos that show various emotions in a professional setting. We'll ask you to do three things:

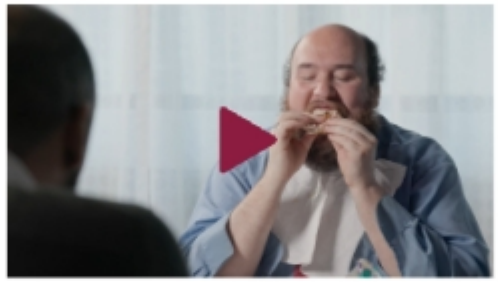

- Identify which emotion the person is expressing
- Identify the verbal signals of the emotion
- Identify the nonverbal signals of the emotion

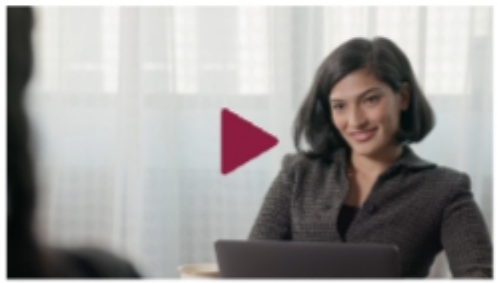

Remember that emotional expression is complex and culturally specific, and so not every person will show emotions in this way.
